

## Software Publisher's Description

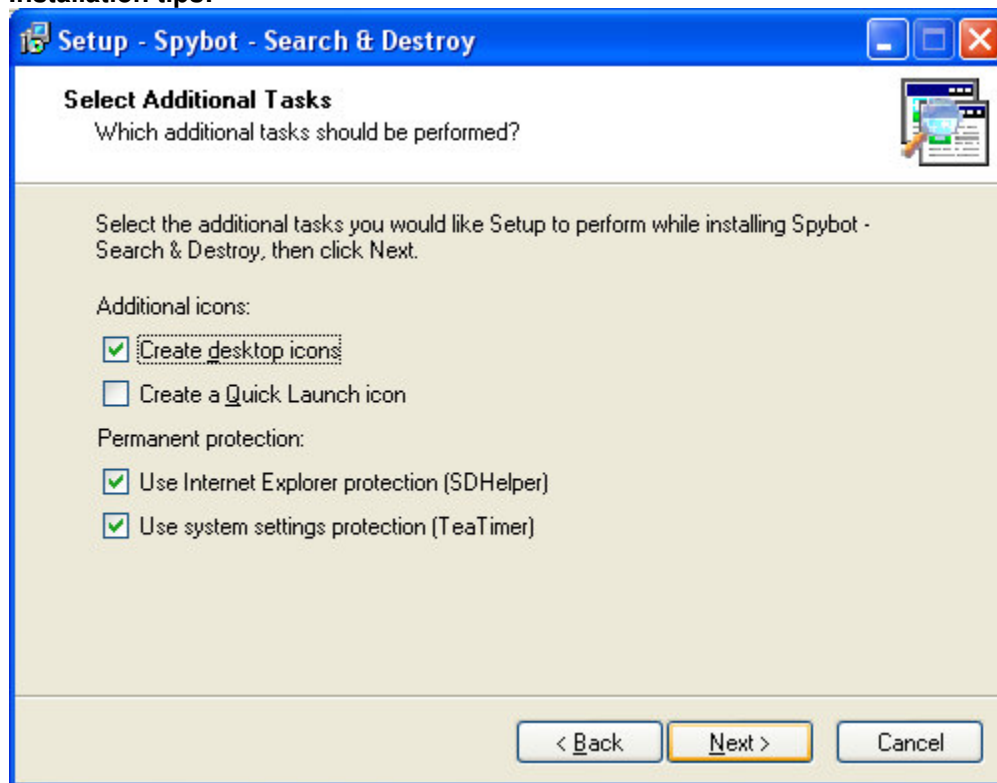

Spybot - Search & Destroy can detect and remove a multitude of adware files and modules from your computer. Spybot also can clean program and Web-usage tracks from your system, which is especially useful if you share your computer with other users. Modules chosen for removal can be sent directly to the included file shredder, ensuring complete elimination from your system. For advanced users, it allows you to fix registry inconsistencies related to adware and to malicious program installations. The handy online-update feature ensures that Spybot always has the most current and complete listings of adware, dialers, and other uninvited system residents.

Version 1.3 adds enhanced immunization features, an improved interface, and integration of BrowserManager for spyware detection, plus the new Hosts File feature and bug fixes.

## Download.com Review of Spybot - Search & Destroy

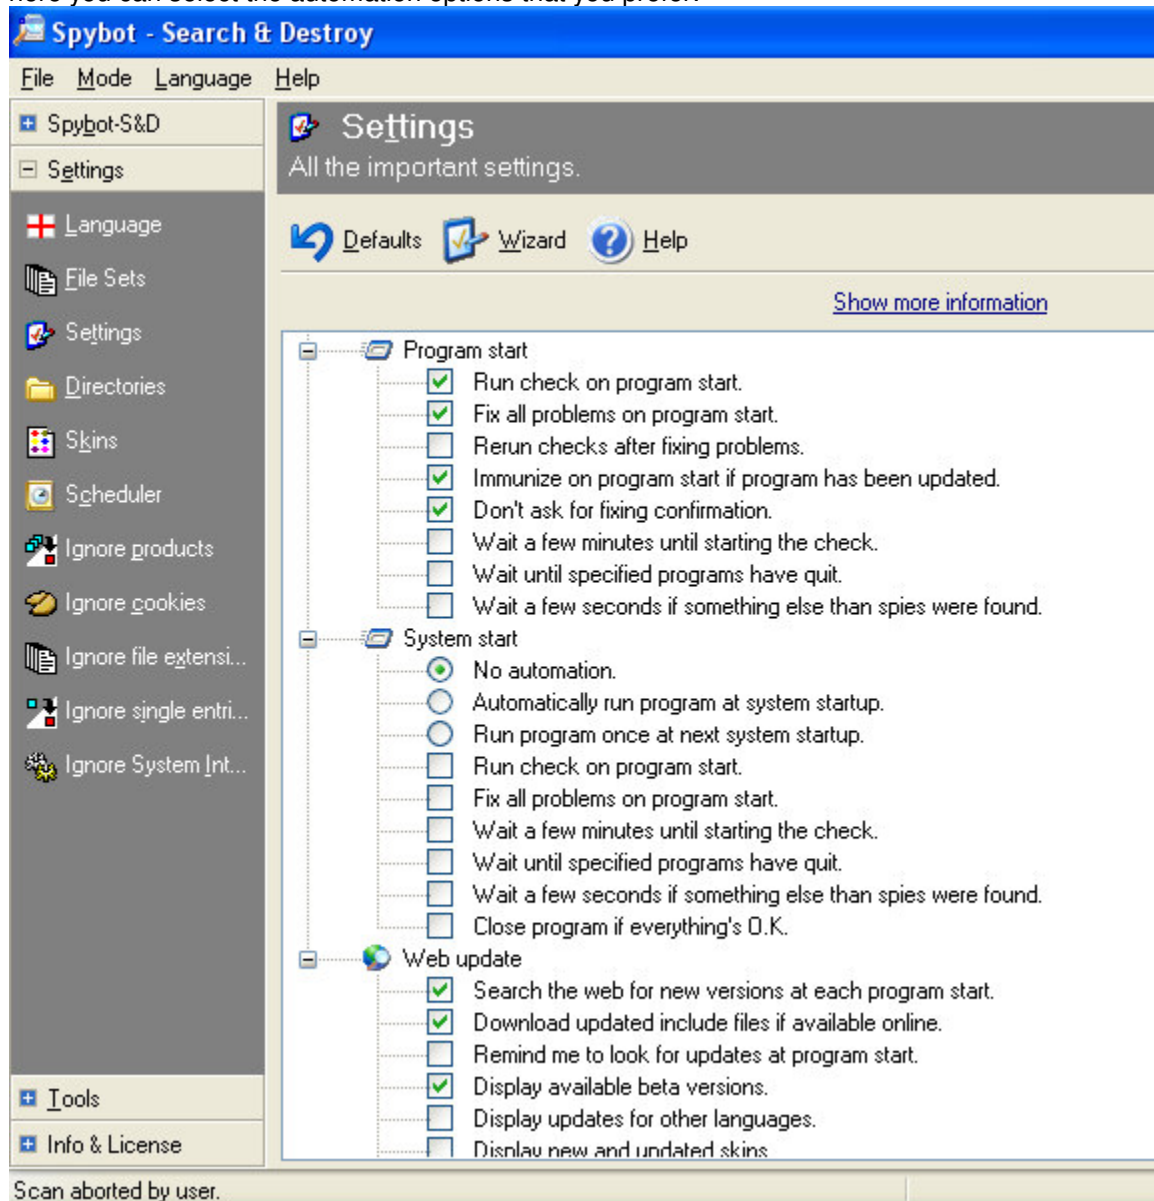

The latest version of Spybot - Search & Destroy adds some truly useful features to an already excellent app. The program still checks your system against a comprehensive database of adware and other system invaders, but it works much faster now (in our testing, three minutes versus 10 minutes previously). It also features several interface improvements. Scan results now appear arranged by groups in a tree, and a sliding panel lets you instantly view information about a selected item to help you decide whether to kill it or not. The Immunize feature blocks a plethora of uninvited Web-borne flotsam before it reaches your computer. Other useful tools, including Secure Shredder, complement the program's basic functionality for completely destroying files. Hosts File blocks adware servers from your computer, and System Startup lets you review which apps load when you start your computer. The functionality makes Spybot - Search & Destroy a must-have for all Internet users, and this version is a worthwhile upgrade.

## Installation tips:

Check to install the TEA TIMER. This will monitor your registry for unauthorized modifications. The installation wizard will offer to create a backup of your registry-its optional but recommended. Click on Create and then Next.

Follow the installation wizard to check for updates & then install them. Click on Search, then Download and then Next.  
 Then you will Immunize the program to activate the list of updates. Click on Immunize, then Next.  
 Then click on Start Using the Program.  
 Many of the functions can be automated, but first you have to change the MODE to Advanced.  
 Click on the drop down MODE menu and click on Advanced. Click on YES when it asks you if you are sure.  
 On the left click on the SETTINGS bar, then click on the SETTINGS icon in the center of the screen.  
 here you can select the automation options that you prefer:

**\*\*\*\*\*If you select to search for the updates automatically you MUST have your internet connection established before you open the program!**
